RE: M/057/002 Reclamation Contract

Dear Lynn,

Submitted herewith is reclamation contract form MR-RC as required by the Utah Mined Land Reclamation Act and requested during the site visit May 15, 2002.

It is GSL's understanding that the reclamation surety covers:

- Potash, Salt, and Magnesium Chloride plants general cleanup and salvage
- Bear River Bay pond dike breaching in accordance with Utah wildlife management negotiations
- All pump station equipment removal at #1,2,3,4,5,6,7,8,9,10,11,13,14,15,16,17,112,113
- West Desert pond main dike breached every mile
- West Desert structures all removed and concrete broken up into rip-rap
- West Desert access road crossing 1¼ mile of State lease land breached every ½ mile
- Four (4) borrow pits (Little Mountain-North 10 acres, Little Mountain-South 72 acres, Pokes Point 80 acres, and Strong's Knob 23.8 acres) by regrading and revegetation. Borrow pit #2 with 3 acres and borrow pit #4 with 3 acres were leased and are no longer used and may be considered for removal from the disturbed acreage total during the next Reclamation Contract renewal.
- The legal description of GSL's operation includes all State lease lands, however, no reclamation activity is required for solar ponds, 21 miles of underwater channel (Behren's Trench) in the Great Salt Lake, or 3 ½ miles of underwater channel (Intake Canal) in the Great Salt Lake

Sincerely,

A handwritten signature in black ink, appearing to read 'Mark Kaschmitter'.
